On Saturday, December 13, 2008, members of the Clarence Center Volunteer Fire Company conducted a site evaluation and walk-through of the plant and offices of Malyn Industrial Ceramics. They were given copies of the plant layout which indicate the location of major equipment, work areas, and all facility entrances. They were advised of the unusual operating conditions of the high temperature induction furnaces and the attendant cautions to be exercised in the event of disastrous furnace failure. The purpose of the program was to enhance the safety of the location and the employees so that the quality, price, and delivery of MiCi products will be preserved.

After the tour, the firemen were joined by MiCi representatives Michael and Pat Malyn, Christina Gossett, and John Reynolds for a coffee table discussion of both companies and the preparedness of both to handle any potential emergencies.
